Novelty (N)	Claims	1-7	YES
	Claims		NO

Industrial applicability (IA)	Claims	1-7	YES

Document 1: JP, 2002-273219, A (Fuji Photo Film Co., Ltd.), 24 September, 2002 (24.09.02)

Document 2: JP, 3-261770, A (Research Development Corp. of Japan), 21 November, 1991 (21.11.91)

Claims 1-7

The subject matters of claims 1-7 are not described in any of the documents cited in the ISR, and so appear to be novel and to involve an inventive step.

Document 1 (the claims) cited in the ISR discloses (a) a variable-structure element whose structure is varied by light and (b) a scavenger having DNA of length of 810 nm or less.

Document 2 (page 3, upper left column) cited in the ISR discloses that a triazine derivative is bonded to a nucleic acid base derivative to form a film structure.

However, documents 1 and 2 do not describe that the arrangement in an amphipathic compound having nucleic acid bases is made by means of forming base pairs with oligonucleotides that form base pairs with nucleic bases. On the other hand, the invention of the present application enables the 3-dimensional arrangement structure of organic ultra-thin film to be controlled by that feature.
